Adding Friends

To add a new friend, just expand the identities list at the top of the file, like this:

```
[
["mel", "0.0.0.0"],
["inventor", "localhost"]
] @=> string hostnames[][];
```

where the line with nickname mel is at ip address 0.0.0.0 and my own nickname is inventor at ip address localhost.

Sending commands

the format for commands is as follows:

identity command value

where identity is your friend's nickname (or your own), command is a single text word, and value is a floating point number. The available commands are:

identity volume value
sets the volume of the beep

identity frequency value
sets the frequency of the beep

identity beep value
beeps your friend with beep volume value * the set volume

identity ps.mix value
