
NOTES:

POWER CONDITIONING:

This module runs on +/- 12 volts. It can use +/-15 if you add the regulators.

MISC:

* Install either the trimmer or the panel control. Not both

If the sustain trimmer is installed as a panel pot, you don't really need the Sustain switch.

If the VCF Q trimmer is installed as a panel pot, you don't really need the Resonance switch.

If the Square Wave duty trimmer is installed as a panel pot, you don't really need R30.

You can omit R30, or leave in if you like the effect.

R30 sets a fixed pulse width enabled by the Pulse/Square switch. Change this to suit.
