

MiniBrute : Analog Board
CU13001
ARTURIA

remove R230 and add NC jack
with new R230 on output side
for post-filter, pre-VCA input

remove R190' and add NC jack with new R190
on output side for post-mixer, pre-VCF input

increase resistor values for less pitch mod from
vibrato (including aftertouch) [R85] and LFO [R91]

increase value of R89 for
better upper octave linearity

reduce R282 for less
AfterTouch vibrato depth

cut trace and add trimmer if both pitch vibrato
and cutoff freq depth too strong from aftertouch sensor...
or between hardware sensor and ribbon connector?!!
Or two trimmers-- one at AT_VCF_Cutoff [R212]
one at AT_Vibrato_Amount [R282]
